With facilities in every way greater than any others, we solicit your patronage upon the assurance of prompt service and fair prices at all times.

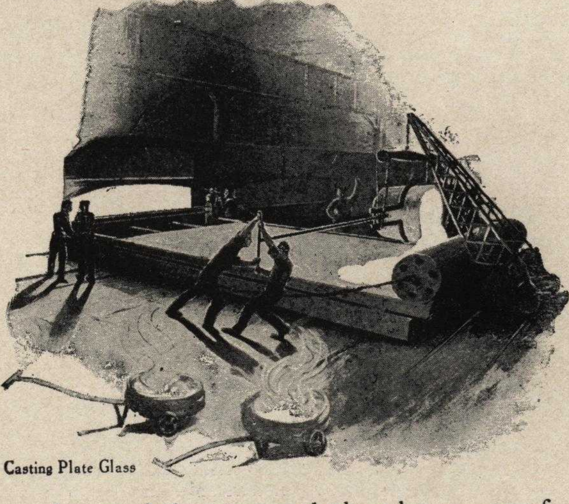
CLEVELAND PUBLIC LIBRARY

THE MAKING OF PLATE GLASS

WE use only **Polished Plate Glass** in all our Fitted Framed Mirrors in place of the thin Imported German Mirrors so long in use. While the cost of producing Polished Plate Glass is much more than the thin Imported Glass, we are using the Polished Plate Glass in replacing the imported product at no greater cost to the trade, in addition to the great saving in the breakage in transit, the quality and thickness being the same as are used in the best furniture.

That some little idea may be gained of what it costs and the extreme care that must be used to produce Polished Plate Glass and Mirrors, we give below a few brief sketches of how Plate Glass is made.

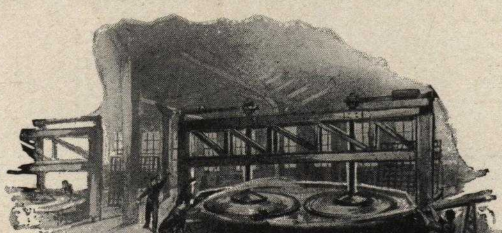
This is a large, massive, flat table of iron, having as an attachment a heavy iron roller which covers the full width, and arranged so as to roll the entire length of the table. The sides of the table are fitted with adjustable strips which permit the producing of plates of different thicknesses. The molten glass metal is now poured upon the table from the melting pot, and the roller quickly passes over it, leaving a layer of uniform thickness of about one inch. The heavy roller is now moved out of the way, and then by means of a stowing tool the red hot plate is shoved into an annealing oven.



Casting Plate Glass

Grinding and Polishing

The grinding table is a large flat revolving platform made of iron, twenty-five feet or more in diameter. The plates are conveyed from the annealing oven to the grinding machines, and thence to the racks, by overhead electric trolley system. The grinding table is prepared by being flooded with plaster of Paris and water; then the glass is carefully lowered, and a number of men mount upon the plate and tramp it into place until it is set. After this, greater security is obtained by pegging with prepared wooden pins,



Grinding the Plate

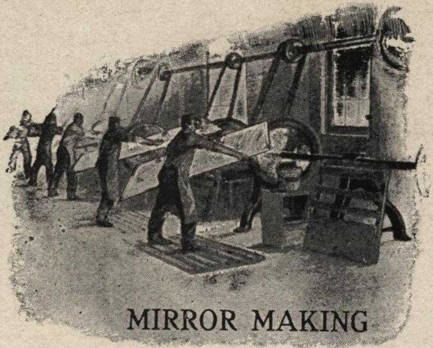
and then the table is set in motion. The grinding is done by revolving runners. Sharp sand is fed upon the table, and a stream of water constantly flows over it. After the first cutting by the sand, emery is used in a similar manner.

Afterward comes the polishing, which is done on another special table. The polishing material is rouge, or iron peroxide, applied with water, and the rubbing is done by blocks of felt. Reciprocating machinery is so arranged that every part of the plate is brought underneath the rubbing surface.

The grinding and polishing has taken away from the original plate half of its thickness, sometimes more. There is no saving of the material; it has all been washed away.

Beveling Plates

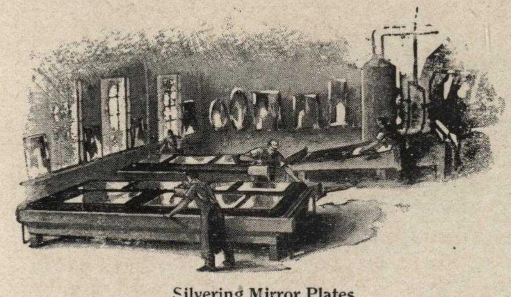
In preparing plate glass for mirrors great care must be exercised in the selection of the plates. This selection bears reference not only to surface defects, but to the quality in general; defects which cannot ordinarily be seen are magnified many fold after the glass has received a covering of silver.



MIRROR MAKING

Beveling

In the process of beveling, the plate passes through the hands of skilled workmen of five different divisions, namely: Roughers, emerers, smoothers, white-wheelers and buffers; and different abrasive materials are used in the order indicated by the titles. These materials are sand, emery, natural sandstone imported from England, pumice and rouge.



Silvering Mirror Plates

Silvering

The plate, after leaving the beveling room, is again carefully examined for surface defects. These defects may consist of scratches caused inadvertently by permitting the surface of the plate to come into contact with the abrasive material. These scratches are removed by hand polishing, which must be skillfully done; otherwise the reflection will become distorted through over-polishing in a given area or spot. The plate is then taken to a wash table, where the surface to be silvered is thoroughly washed with distilled water; after which it is taken to a table that is covered with blankets, and which is heated to a temperature of from 90 to 110 degrees. The blanketing is to protect the plate from being scratched, and also to catch all of the silver waste. The silvering solution is nitrate of silver liquefied by a certain formula; and is poured over the plate; the fluid having an appearance which to the ordinary observer looks like nothing other than pure distilled water. Within a few minutes the silver, aided by a reactory, added prior to pouring, begins to precipitate upon the glass; the liquids remaining above, and thus preventing air and impurities from coming into contact with the silver. Such contact would produce oxidation. After the silver is precipitated the plate is thoroughly dried, shellaced and painted; after which it is ready for commercial use.

Special Notice:—**Furniture dealers are sure to be confronted with an increasing demand for Furniture covered with Plate Glass Tops. — *See pages 62 and 63.***

Polished Plate Glass Shelves

For polished plate glass shelves, polished edges (see page 9), with nickel plated brackets. Suitable for above.

Send us your orders for Imported French Picture Glass

Combination Lavatory Mirror

With the Caspar Bracket Attachment for Plate Glass Shelf and Adjustable Nickel Plated Towel Rack

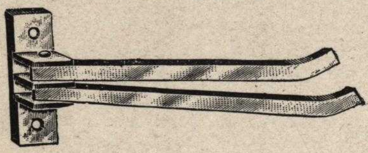
PLATE glass shelves for use in bath rooms and lavatories have been desired by many, but the trouble and annoyance in hanging have largely curtailed their use. We feel that we are in a position to place before you a combination lavatory mirror with plate glass shelves which, for simplicity for hanging, cannot be equalled.

The Fixtures

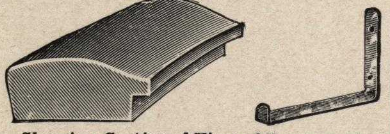
As can be seen, are practically all in one. Easily hung from the top with nickel hangers, which avoid any possible chance of damaging the walls by making holes in the marble, tile or plaster in order to properly fasten the small separate brackets for the plate glass shelf, as heretofore.

Adjustable Nickel Plated Towel Rack

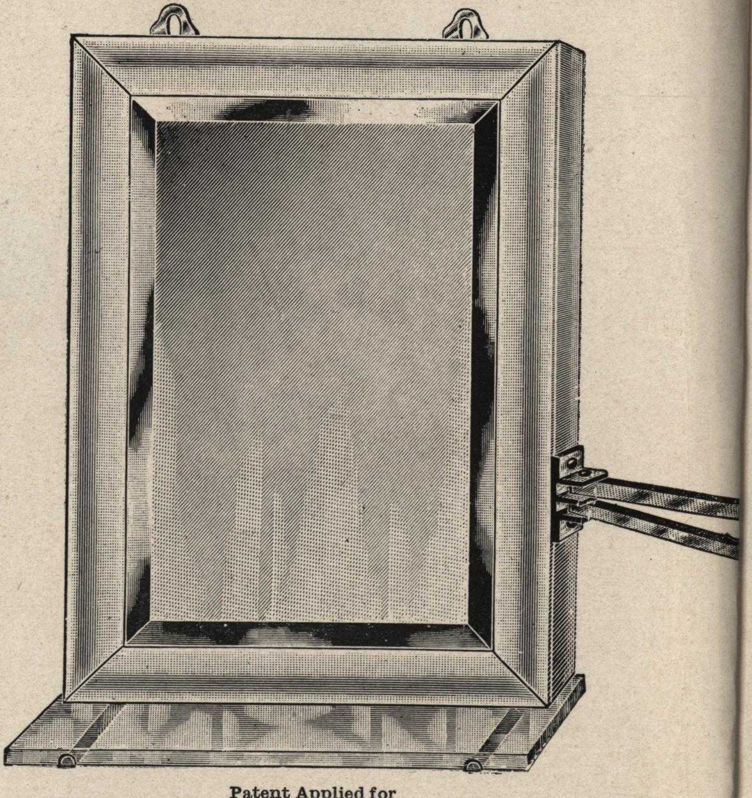
Arms Seven Inches



Price Each 75 Cents



Showing Sectional View of Frame and Brackets



Patent Applied for

The Nickel Brackets Holding Plate Glass Shelf

Are so made that they can be easily and securely fastened to back of frame, thus holding firmly the plate glass itself.

Plate Glass Shelf

Can be easily removed; is more readily cleaned than wood or marble, and is not affected by acids, oils or medicines.

Frame made of 2-inch white enameled hard finish. Fitted with beveled edge plate glass mirror, nickel towel rack, brackets and hangers, polished plate glass shelf 6x20.

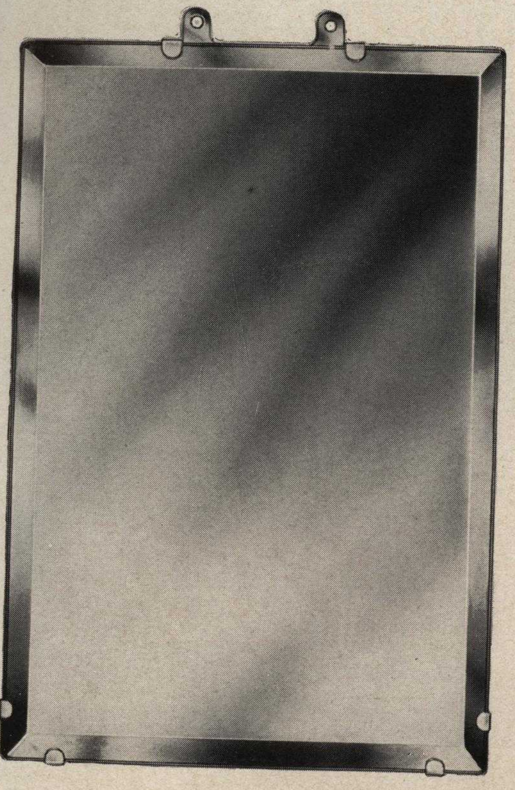
We are sole Selling Agents for the Caspar Bracket Attachment—Patent applied for

Simplex Frameless Mirror

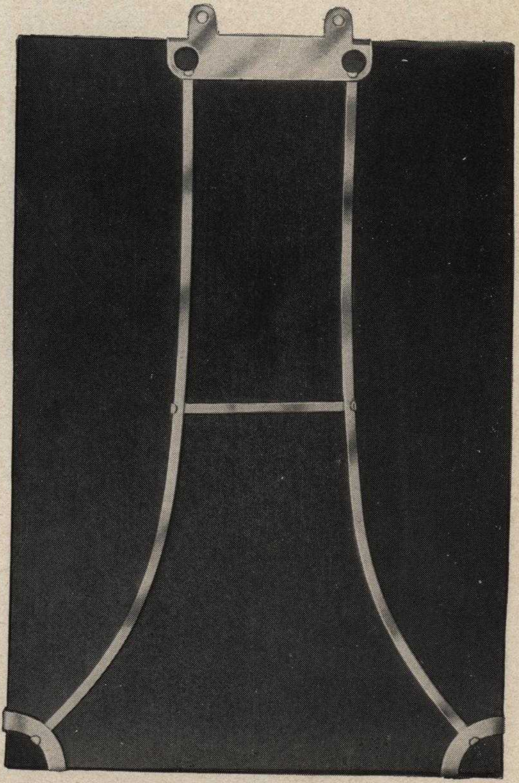
With patented adjustable steel nickel-plated holder. Ready to hang.

Patent applied for.



Patent applied for.

Above illustration showing Frameless Mirror, ready for use (to hang).



Patent applied for.

Above illustration showing steel nickel-plated holder, made of steel heavily nickel-plated, all parts adjustable, no screws or bolts.

This frameless mirror is something new and unique, and should find prompt and ready sale, being both new and attractive in appearance. The mirror is easily cleaned without removing from the holder. No troublesome nickel-plated frame to polish. The mirror is of polished plate glass with edges beveled and polished, and back of mirror protected with a paint made especially to withstand all moisture and prevent the silver from being easily damaged. Packed one each in corrugated boxes. Made to hang up right only.

No. 36, mirror 12x18. Price complete	**$6.00**
No. 37, mirror 16x20. Price complete	**8.00**

We can fill orders for Mirrors in all sizes without Frames where desired

Furniture dealers are sure to be confronted with an increasing demand for Furniture covered with Plate Glass Tops

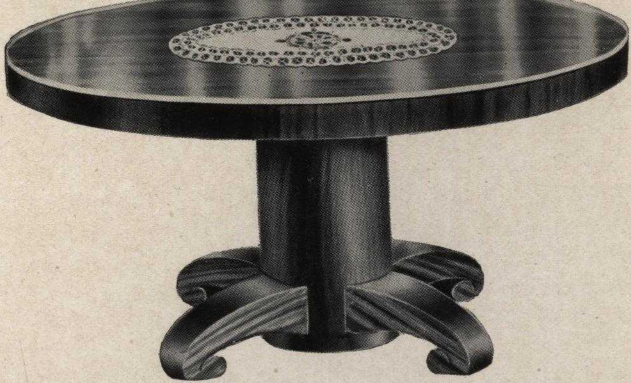
The plate glass top, as it has been adapted to furniture, has long since passed the stage of experiment and novelty, and has established itself so firmly on its own intrinsic merits that it has become almost a necessity for the designer and manufacturer of dressers, chiffoniers, tables, tabourettes and bed-room and dining-room furniture in general to accord it careful consideration in originating and carrying out their furniture. Its highly intrinsic value as a protector and beautifier for the splendid grained woods used for tops, and even to the finishes of the tops that are now so generally used on furniture, has been the reason for its coming into existence.

Plate Glass Tops for Dressers and Chiffoniers

It often happens that perfumes, curling irons, lighted cigars, ink, etc., spoil the surface of dressers, while if covered with a glass top that can be easily wiped off this can be obviated. These glass tops also preserve and at the same time enhance the beauty of lace covers used on bureaus and dressers.

Prices on Application

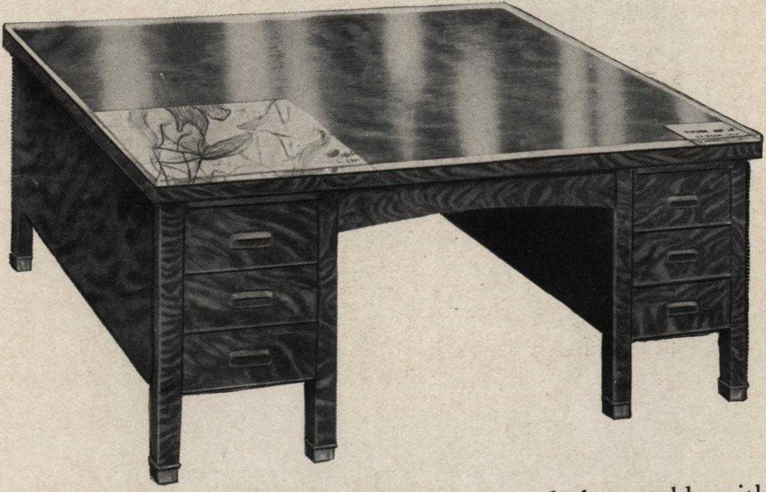
Plate Glass Tops for Dining-Room Tables



That which has been previously stated regarding the merits of plate glass for tops of various kinds of furniture can be repeated here.

We wish to caution you when submitting dimensions by which to execute your order, as it seldom happens any round table is a true circle; consequently, it is necessary to furnish a pattern cut to fit and the plate glass can be laid on top of the pattern and cut so there can be no question about it fitting the table when delivered.

Plate Glass Tops for Desks and Tables



There is a distinct feeling of satisfaction in writing at a desk or table with a glass top. The effect is pleasing to the eye, the polished surface is preserved and there is no danger of staining or scratching it. Plate glass tops are greatly in demand for use on office desks, hotel furniture, restaurant tables, hospital funiture and in the home. Hygienically it is an advantage, as it is a simple matter to keep the glass clean. The chief objection has been the price. You will be surprised at the moderate cost at which these tops made to fit any desk, table or other piece of furniture can be supplied.

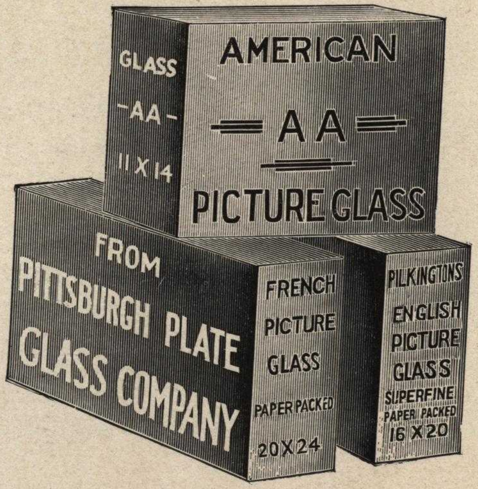
Prices on Application

Special Select Picture Glass

Imported Picture Glass

Our facilities for handling your requirements of **Picture Glass** cannot be equalled in this country. We aim to carry a complete stock of the following brands at each warehouse (see second page of cover) but should it so happen that the particular branch in which your city is located, cannot fill your order, they will immediately arrange for shipment from the nearest one to you.

All our **Glass** is especially selected for the framing trade; Our foreign department abroad employ men for this particular purpose, who make it a point to personally visit the factories quite frequently on their tours of inspection.



Lighthouse or Peerless Brand

This is specially selected and well flattened **Glass,** paper packed, in a sealed, dust-proof package, thus eliminating the possibility of scratches.

It is used very largely by the more particular picture trade, all of whom have spoken highly of its quality. We cheerfully recommend it to those looking for something extremely good.

Prices on Application

Napoleon Brand

This brand of **Glass** is really the friend of the picture trade who have not been able to get satisfaction from American "A A".

It is paper packed and while not extra selected like the Lighthouse Brand, the quality is so superior to other makes that after once tried, you will use no other.

Another prominent feature of this **Glass** is the low price at which it can be procured.

Prices on Application

Pilkington's English Superfine

None better the world over. It has been the acme of perfection in picture glass for years and while its cost is a little higher than the **Peerless,** the quality more than offsets the difference. For your very best trade, try a few boxes of it.
